

How to add Storefront access token

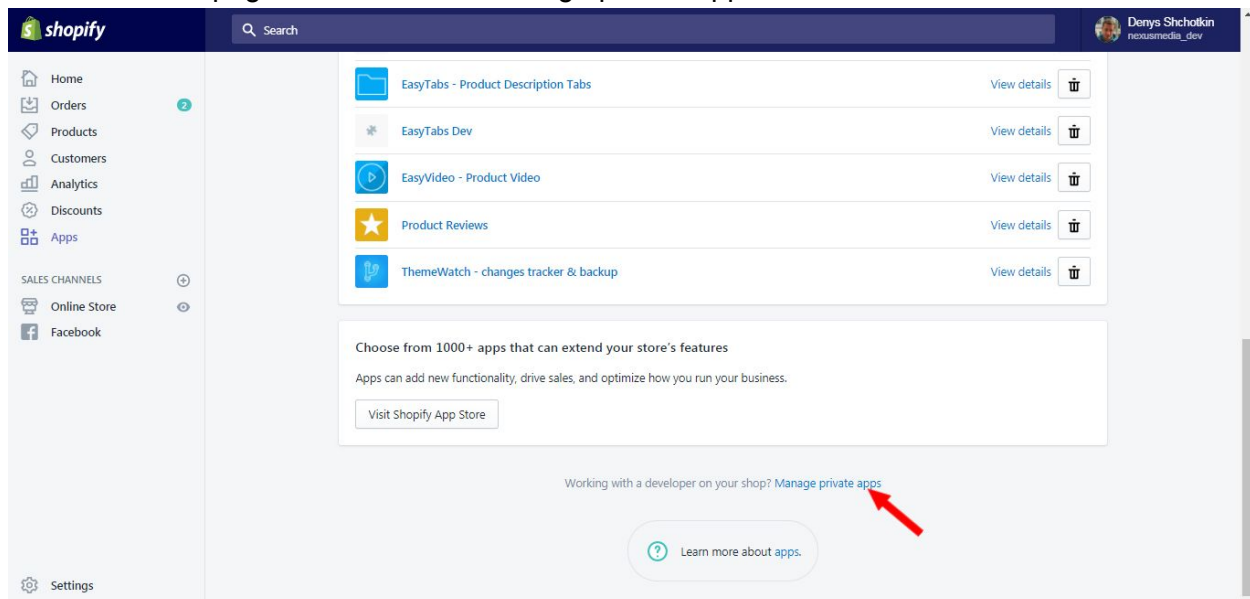

Step 1 of 6

Please go to the Apps section:

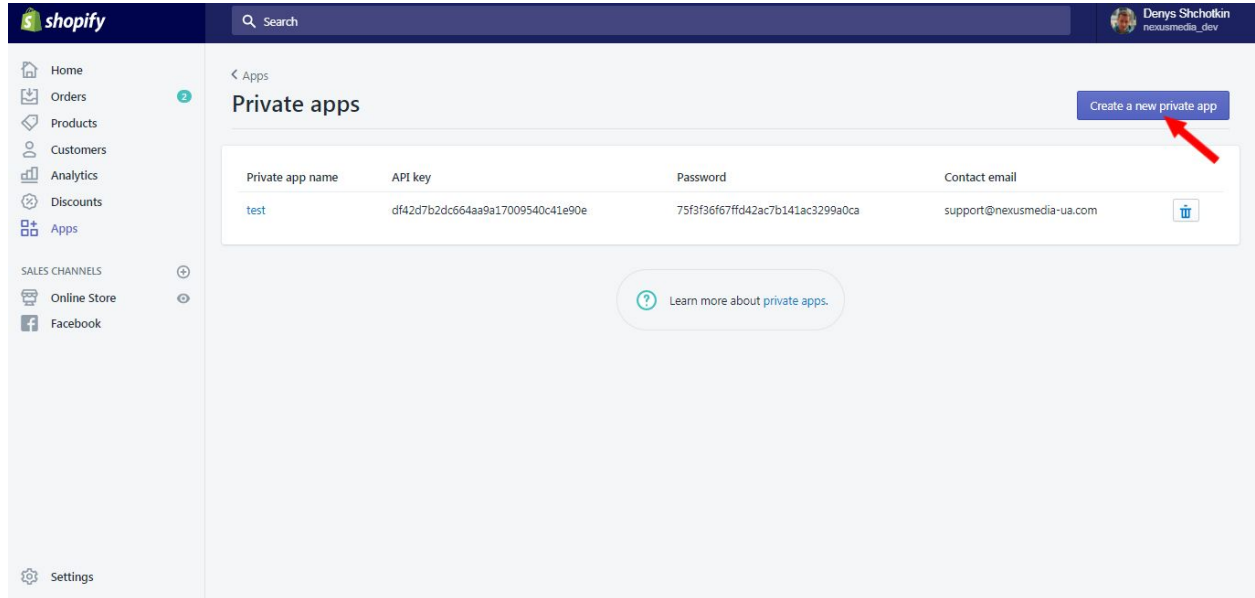

Step 2 of 6

Scroll down the page and follow the “Manage private apps” link:

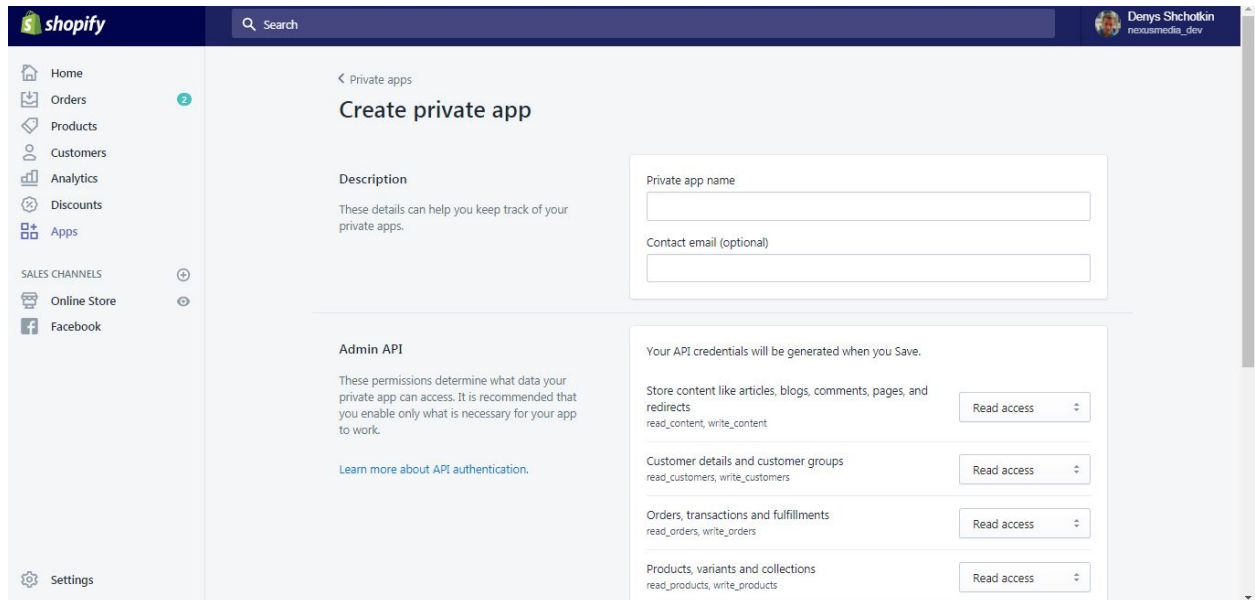

Step 3 of 6

Click “Create new private app” button:

You'll see the following page:

Step 4 of 6

Fill the form and don't forget to check the "Allow this app to access your storefront data using the Storefront API" option:

The screenshot shows the Shopify Admin interface for configuring a private app. On the left is a sidebar with navigation links: Home, Orders (with a blue notification bubble), Products, Customers, Analytics, Discounts, Apps, SALES CHANNELS, Online Store, and Facebook. The main content area has a top bar with "Unsaved changes" and "Discard" and "Save" buttons. Below this, there's a section for "API permissions" with three rows: "Customer details and customer groups" (permissions: read_customers, write_customers), "Orders, transactions and fulfillments" (permissions: read_orders, write_orders), and "Products, variants and collections" (permissions: read_products, write_products). Each row has a "Read access" dropdown menu. A link "Review disabled Admin API permissions" is at the bottom of this section. Below the permissions section is the "Storefront API" section. It contains a checkbox labeled "Allow this app to access your storefront data using the Storefront API" which is checked, with a red arrow pointing to it. Below the checkbox is the text "Your storefront access token will be generated when you Save." At the bottom of the main content area are "Cancel" and "Save" buttons, and a link "Learn more about private apps." with a question mark icon.

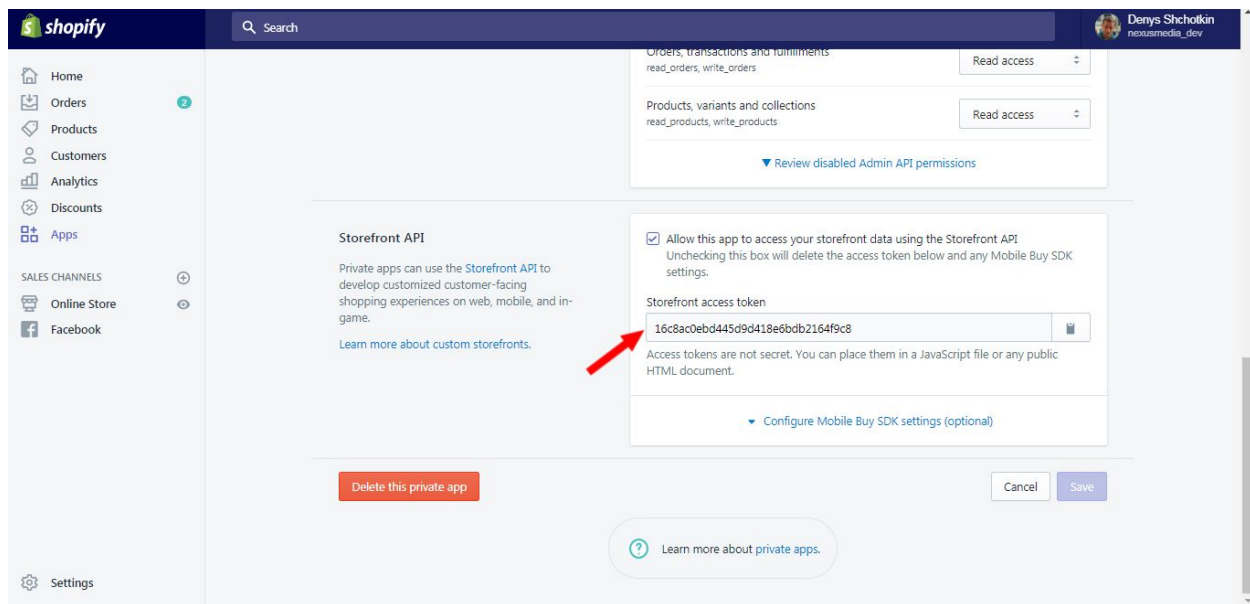

Save the changes.

Step 5 of 6

Once done you'll see the next page:

The screenshot shows the Shopify Admin interface for the "EasyMobile" private app configuration page. The top bar includes the Shopify logo, a search bar, and the user profile "Denys Shchotkin nexusmedia_dev". The left sidebar is the same as in Step 4. The main content area has a breadcrumb "Private apps" and the app name "EasyMobile". A green success message states: "Your Admin API credentials and Storefront access token are ready to use below. Read the Admin API or Storefront API documentation to get started." Below this is the "Description" section with the text: "These details can help you keep track of your private apps." To the right of the description is a form with three fields: "Private app name" (containing "EasyMobile"), "Contact email (optional)" (containing "support@nexusmedia-ua.com"), and "API key" (containing a long alphanumeric string). Below the API key field is a "Password" field (containing a masked password) with a "Show" button and a copy icon. At the bottom is an "Example url" field (containing a long URL) with a copy icon. A link "Learn more about API authentication." is at the bottom left of the main content area.

Scroll down the page and find the “Storefront access token” field:

Step 6 of 6

Copy and paste the access token to the appropriate field on the app settings page and save changes:
